Software Requirements Specification (SRS)

1. Introduction

The BookSmart web application allows users to search for books, add them to a shopping cart, and complete a purchase through a checkout process.

2. Purpose

This document defines the functional and non-functional requirements for the BookSmart online bookstore system. It serves as a guide for both developers and testers.

3. Functional Requirements

FR ID	Requirement Description
FR1	The system shall allow users to search for books by title or author.
FR2	The system shall display search results with book title, author, and price.
FR3	The system shall allow users to add selected books to their cart.
FR4	The system shall display all items in the cart with their quantities and total price.
FR5	The system shall allow users to remove books from the cart.
FR6	The system shall allow users to proceed to checkout by entering name, email, and address.
FR7	The system shall validate checkout information and display appropriate error messages.
FR8	The system shall confirm the order and display a confirmation message after successful checkout.

4. Non-Functional Requirements

NFR ID	Requirement Description
NFR1	The system shall respond to search queries within 3 seconds.
NFR2	The system shall be compatible with major browsers (Chrome, Firefox, Edge).
NFR3	The system shall ensure that user data is not lost after a page refresh.
NFR4	The system shall handle up to 100 concurrent users.
NFR5	The system shall use HTTPS for secure communication.

5. User Roles

Visitor: Can search and browse books. **Customer:** Can add books to cart and complete purchases.

6. Constraints

The application will be web-based and optimized for desktop and mobile browsers.

7. Assumptions

Users have an active internet connection and modern browser.
